

MORTORQ **Super**TM SPIRAL DRIVE SYSTEM

The revolutionary **MORTORQ Super**TM spiral drive system was designed specifically for automotive and commercial high torque applications, creating the optimum compromise of bit strength verses recess strength.

Mortorq's patented drive system provides full driver contact over the entire recess wing, resulting in extremely high torque capability without risk of damage to the screw head or surrounding areas.

This drive system features a low profile head and a high strength recess that allows the flexibility to create lighter weight assemblies that can significantly reduce material costs.

The MORTORQ Super fasteners are available in various head styles.

(Other head styles available upon request)
